CERAMET

Cyber Security & Network Design Consulting

Tailored approach to help you achieve your Cyber Security Objectives

Why Choose Us?

Experienced and Personalized Service

Proficient and vendor certified personnel will be at your service. Our experience comes from 15+ years working for several IT companies worldwide that provide NS (Network Security), Network Engineering, and SOC services for customers in different industries.

We offer a personalized service, meaning you will always be in contact with the same personnel on our end.

The assigned person will guide you through all the stages of your project and deliver all the information and documentation that you may require.

SLA-Based Resolution

Both for incidents and requests made from the customer side.

Cover your needs

Currently, strong security both in a network and system approach is essential, given the growth of global traffic, data, and services provided digitally. For this reason, our main objective is to make the digital world a safer place, by adapting to your budget.

Our History

With over 15 years of experience in the field, many certifications, and real-world experience in many industries and vendors, we have realized that the only way to make the internet a safer place is to make Cybersecurity known to everyone and make this knowledge available at your fingertips.

Our team began with Network Engineering and progressed to Network Security, Network Detection and Response, and Security Engineering.

This impressive mix of backgrounds enables us to deliver consistently and with a level of expertise that is uncommon in the Cybersecurity landscape.

Our Pledge

Here at Ceramet Services, we consider taking the time to get to know your business is a key element in providing the best service. This means we devote all our time to learning about your needs, your core business. and processes. This allows us to give feedback on improving room for your systems, security policies, network, security, and system hardening to avoid any unnecessary impact on your infrastructure.

24/7 Support

We offer round-the-clock troubleshooting and configuration changes and requests.

Our Core Services

Granular and Tailored approach

Managed Network Services

Network Security Services

Here at Ceramet Services, we understand that every business has it's own infrastructure and processes, that why our services are granular and can be tailored to your Network and Cyber Security needs.

Vulnerability Assessment

Awareness Training

Network Security Engineering

What can we do for you?

Helping you achieve your Network and Cyber Security Objectives

We can focus on boosting productivity, high availability and security of your environment. We can do this by performing an in-depth analysis of your network traffic.

We can define Network Access Control features to hinder any unauthorized access to your network.

We can design a new Network that adapts to new security and network design standards.

We can perform Network and Firewall and System audits to expose any performance or security issues that we find.

We can setup and manage solutions to automatically recognize, report and detect suspicious behaviour before it becomes a real threat.

We can validate security controls and design remediation plans to ensure business continuity.

We can design security policies to enhance Data and Network Security, assure quick response to issues and mitigate risks, amongst other advantages.

We can reduce your attack surface by training your employees and hardening your systems.

CERAMET

What can we deliver?

Helping you achieve your Network and Cyber Security Objectives

We offer a personalized service, meaning you will always be in contact with the same personnel on our end. The assigned person will guide you through all the stages of your project and deliver all the information and documentation that you may require.

Personalized

We are proud to be able to say that our technical experience has a solid foundation, is extensive, and expands around first-line IT vendors and different solutions.

Technical Expertise

We have expertise in every service that we offer within a variety of industries and core businesses, all of which utilize technologies from different vendors.
This has allowed us to obtain a deep knowledge of many of the main vendors in the industry.

Know-How

We continuously evolve our internal processes and knowledge base to provide you with the best service.
Furthermore, we evaluate our communication with the client in three stages during the projects.
This permits us to correct and improve our methodology and detect areas of refinement to satisfy the client in every way.

Constant Evolution

Tailored price plan

We adapt to your budget

We offer personalized price plans for your needs. Normally these types of services are provided at a fixed price by the hour. Knowing that the budget might not allow for this, and that infrastructures vary depending on the customer. We adapt our prices in a way that is both affordable and scalable.

Depending on the service that you require, you have several choices:

- By the hour.
- By number of ports on your device.
- By number of devices that we manage or act on. This being servers, security appliances and network devices.
- By project.
- Hour wallet.

For more information, contact our sales Department by sending us a request for Quote.

The scope of each of the posibilities will be delimited before starting the proyect, but both the scope and the price plan can change depending of our findings, only if the customer approves previously.

CERAMET

How it works

Helping you achieve your Network and Cyber Security Objectives

1

Contact Us

Contact us by sending a Quote request on <u>our website.</u>
Schedule a <u>call</u>.

In this step, we will help you select the price plan that adapts the best to your needs. After reviewing the information gathered and requisites, a second call will be schedule with the assigned Engineer

2

Talk with the assigned Engineer

We will gather all the information required, and ask about your infrastructure, objectives, and scope. Sing of NDA if required.

3

Assessment

We will start inspecting your setup, provide feedback on recommended actions and, depending on the price plan, give a price estimation.

4

Quote and planning

After the quote approval, we will sign the contract, and start working on your infrastructure at a time window of your choosing.

5

Sit down and relax

Our team will perform all the required actions and inform you before and after the procedure is complete. If any issues occur, we will contact you to inform you to advise or request more information.

6

Delivery

We will provide the required documentation and deliver an in-depth report of the actions taken.
